CAPTIVA TOKEN

CAPTIVA TOKEN

The first Shariah-compliant captive insurance which will be backed by gold stable coin on the blockchain
To be released in the 4th quarter of 2023

FUNCTIONALITY:

TRANSPARENCY & TRUST: with its decentralization and immutability features, provides transparency and builds trust. All transactions will be transparent to all participants and once a record has been created, it cannot be changed. This can help to reduce disputes between insurers and policyholders over claims or coverage.

PAYMENTS: Gold-backed stablecoins as a medium of payment for insurance premiums or claim settlements. Faster, more efficient transactions, particularly for international transactions, which can be costly and slow using traditional banking systems.

REDUCED VOLATILITY: A gold-backed stablecoin reduces volatility, providing more certainty for policyholders and insurers.

RISK MANAGEMENT: Gold has traditionally been seen as a safe haven asset in times of market turbulence.

ACCESS TO NEW MARKETS: Using a gold-backed stablecoin opens up new markets.
